Metallic foreign body in the Neck: Case Report

Obce metalowe ciało w szyi: opis przypadku

Shraddha Deshmukh, Omkar Halwai, Arpit Sharma, Jyoti Dabholkar

SUMMARY

Penetrating neck injuries constitute 5–10% of all trauma cases. Such injuries are dangerous because of the high risk of injury to the vital structures in the neck and hence demand an immediate surgical exploration. We present a case of a penetrating injury of the neck caused by the broken metallic fragment of a saw.
